

KNOW YOUR FLOW

ELKHART BRASS

A **Clarience Technologies** Company

Comprehensive 3-Hour Course

Just because water is coming out of the nozzle does NOT mean you are achieving target flows.

1-HOUR CLASSROOM SESSION

2-HOUR TRAINING GROUND ACTIVITY

- Importance of effective GPM vs BTU
- Establishing target flow rates
- Operation of various types of nozzles
- Accurate flow and pressure analysis
- Engine flow test
- Hands on operation of high flow monitors
- Hands on flow stations for 1.5" and 2.5" hand line operations.
- Comparative flow and nozzle reaction with all nozzle types.

The course is designed to heighten awareness to the various types of equipment that create fire streams, and develops a basic understanding of the different types of nozzles in use today. Focuses on identifying the safe, effective GPM delivery capability of individual firefighters and companies as it relates to the limitations of equipment in use.
